

Platelet pre-stimulation, subthreshold TRAP

S2 Fig. Prestimulation with *S. pneumoniae* or TLR agonists fails to modulate human platelet aggregation in response to subthreshold concentrations of TRAP in presence of PBMCs. Prior to stimulation with this subthreshold TRAP concentration, PRP was incubated with *S. pneumoniae* D39, Pam3CSK4 or Lipopolysaccharide (LPS) for 10 minutes in a stirring cuvette in the presence of Peripheral blood mononuclear cells (PBMCs).
