Supplementary table-1: : List of genes that are significantly ≥ 2 fold downregulated in *ATP9A* depleted HepG2 cells as compared to controls. HepG2 cells were transduced with the sh*ATP9A* #33, #34 or sh-control. 72 hours after transduction, cells were harvested for RNA isolation. RNA from *ATP9A* knock-down and control cells was labeled with cRNA labeling kit for Illumina BeadArrays (Ambion) and hybridized with Ref8v3. Genes are presented in the order of their significance.
